Data Visualization with Python

Cheat Sheet : Plotting with Matplotlib using Pandas

Plot Type	Description	Pandas Function	Example
Line Plot	Shows trends and changes over time	<code>DataFrame.plot.line()</code> <code>DataFrame.plot(kind = 'line')</code>	<code>df.plot(x='year', y='sales', kind='line')</code>
Area Plot	Displays data series as filled areas, showing the relationship between them	<code>DataFrame.plot.area()</code> <code>DataFrame.plot(kind = 'area')</code>	<code>df.plot(kind='area')</code>
Histogram	Displays bars representing the data count in each interval/bin	<code>Series.plot.hist()</code> <code>Series.plot(kind = 'hist', bins = n)</code>	<code>s.plot(kind='hist', bins=10)</code> <code>df['age'].plot(kind='hist', bins=10)</code>
Bar Chart	Displays data using rectangular bars	<code>DataFrame.plot.bar()</code> <code>DataFrame.plot(kind = 'bar')</code>	<code>df.plot(kind='bar')</code>

Visual

Plot Type Description**Pandas Function****Example****Visual****Pie Chart**

Displays data as a circular plot divided into slices, representing proportions or percentages of a whole

```
Series.plot.pie()
Series.plot(kind = 'pie')
DataFrame.plot.pie(y, labels)
DataFrame.plot(kind = 'pie')
```

```
s.plot(kind='pie', autopct='%1.1f%%')
df.plot(x='Category', y='Percentage', kind='pie')
```

**Box Plot**

Displays the distribution of a dataset along with key statistical measures

```
DataFrame.plot.box()
DataFrame.plot(kind = 'box')
```

```
df_can.plot(kind='box')
```

**Scatter Plot**

Uses Cartesian coordinates to display values for two variables

```
DataFrame.plot.scatter()
DataFrame.plot(x, y, kind = 'scatter')
```

```
df.plot(x='Height', y='Weight', kind='scatter')
```

Cheat Sheet : Plotting directly with Matplotlib

Plot Type Description Matplotlib Function

Line Plot Shows trends and changes over time `plt.plot()`

Area Plot Display data series as filled areas `plt.fill_between()`

Histogram Displays bars representing the data count in each interval/bin `plt.hist()`

Bar Chart Displays data using rectangular bars `plt.bar()`

Pie Chart Displays data as a circular plot divided into slices, representing proportions or percentages of a whole `plt.pie()`

Box Plot Displays the distribution of a dataset along with key statistical measures `plt.boxplot()`

Example

```
plt.plot(x, y, color='red', linewidth=2)
```

```
plt.fill_between(x, y1, y2, color='blue', alpha=0.5)
```

```
plt.hist(data, bins=10, color='orange', edgecolor='black')
```

```
plt.bar(x, height, color='green', width=0.5)
```

```
plt.pie(sizes, labels=labels, colors=colors, explode=explode)
```

```
plt.boxplot(data, notch=True)
```

Visual

Plot Type

Description

Matplotlib Function

Scatter Plot

Uses Cartesian coordinates to display values for two variables

plt.scatter()

Subplotting

Creating multiple plots on one figure

plt.subplots()

Customization

Customizing plot: adding labels, title, legend, grid

Various customization

Example

```
plt.scatter(x, y, color='purple', marker='o', s=50)
```

```
fig, axes = plt.subplots(nrows=2, ncols=2)
```

```
plt.title('Title')
plt.xlabel('X Label')
plt.ylabel('Y Label')
plt.legend()
plt.grid(True)
```
